PROFESSIONAL SUMMARY

Full-stack developer with hands-on experience building and deploying production web applications. Recently designed and shipped DevBoard, a collaborative project tracker built with Java, Spring Boot, React, and PostgreSQL — deployed live on Render and Vercel. Comfortable across the stack: REST API design, JWT authentication, Docker containerization, and responsive React interfaces. Seeking a junior software engineering role on a team building real products.

SKILLS

- **Languages:** Java, TypeScript, JavaScript (ES6+), Python, SQL
- **Backend:** Spring Boot, Spring Security, Spring Data JPA, Django, REST APIs, JWT
- **Frontend:** React, Next.js, Tailwind CSS, HTML5, CSS3
- **Databases:** PostgreSQL, MongoDB, MySQL
- **DevOps & Tools:** Docker, AWS, Git, GitHub

EDUCATION

University of Alberta Jan 2022 – Mar 2026
Bachelor of Science in Computer Science

EXPERIENCE

TechGenPro Edmonton, AB (Remote)
Software Engineer Intern *May 2024 – Sep 2024*

- Built 10+ responsive UI features in React and TypeScript, driving a 30% increase in user engagement across the product.
- Developed Python validation pipelines that reduced data processing errors by 20%, feeding clean data to frontend dashboards used by non-technical staff.
- Translated Figma wireframes into accessible React components, cutting design-to- development handoff time by 15%.
- Created reusable component patterns and frontend documentation adopted by the team, accelerating new-feature development by 50%.
- Implemented code splitting and lazy loading on high-traffic pages, reducing initial page load time by 20%.
- Built and documented RESTful APIs in Django, serving [N] endpoints used by the frontend; wrote PyTest suites covering happy paths and edge cases.
- Coordinated the release of 4+ features with product and design stakeholders via Jira, ensuring functional and visual quality standards were met.

PROJECTS

DevBoard devboard-ui.vercel.app

- Built a REST API in Java 21 / Spring Boot 4 with JWT authentication, role-based access control (OWNER / EDITOR / VIEWER), and email-based team invitations.
- Designed a normalized PostgreSQL schema (5 entities) with ownership and membership permissions enforced at the service layer, not just the controller.
- Containerized the backend with a multi-stage Dockerfile; deployed the full stack to Render (backend), Vercel (frontend), and Neon (database).
- Wrote JUnit 5 and MockMvc test suites with JaCoCo coverage reports.

Site Management Platform

- Developed a multi-platform application with data analytics features and user/site management using JavaScript and TypeScript
- Built data analytics modules for user and administrative dashboards to enable data-driven insights
- Designed and refined web and mobile interfaces using Figma
- Developed backend logic for user account and site record management, ensuring data consistency across platforms
- Utilized Playwright to debug and test modules for reliability and performance

Social Media Platform

- Developed a distributed social media web application using Python, Django, and JavaScript
- Designed and implemented database schema for efficient storage and retrieval of user and interaction data
- Built backend functionality for cross-node communication
- Created RESTful APIs for node-to-node communications and core application features

E-Commerce Web Application

- Built a full-featured e-commerce web app with product management, cart functionality, and secure account handling using React and MongoDB
- Implemented token-based authentication for secure user login and logout workflows
- Developed MongoDB pipelines for efficient product data management
- Designed and implemented an admin dashboard with responsive UI components

CERTIFICATE

AWS Solutions Architect – Associate – Amazon Web Services *Aug 2026*
